

Collis Test Tools

Collis Card Simulator

Who is it for?

Collis Card Simulator is the most complete card simulation tool for Acquirers, Acquirer Processors, Merchants and Terminal Vendors that want to test the correct processing of payment transactions on payment devices.

Why do you need it?

The Collis Card Simulator simulates the real behavior of a contact or contactless EMV card without the need for any physical cards. It simplifies the terminal testing procedure in various ways, mainly by eliminating the dependency on EMV issuers and schemes for physical test cards.

What is inside?

Collis Card Simulator is a state-of-the-art tool that can simulate any and all functions of an actual smart card, both contact and contactless. The tool simulates card profiles for all major payment schemes.

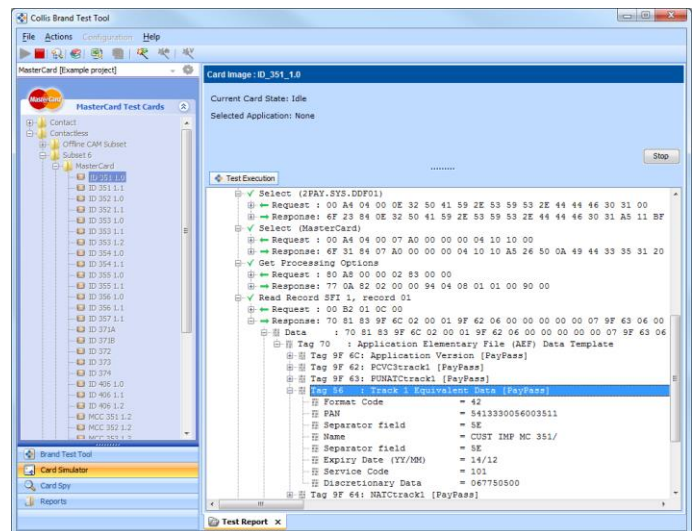

Collis Card Simulator is delivered with a pre-defined set of card images including card images for:

- Visa ADVT, CDET, and ADVT-qVSDC
- MasterCard TIP, M-TIP, NIV
- American Express AEIPS
- Diners Club Acquirer E2E
- Discover Acquirer E2E
- JCB TCI
- Interac

Collis Card Simulator can simulate both correctly functional cards and faulty cards. Simulating cards with errors enables you to observe the terminal's behavior during a faulty card transaction and whether it reacts in the correct way.

A detailed and clear report of any testing is generated by Collis Card Simulator. All technical data in commands and responses are logged and interpreted.

Collis Card Simulator works in conjunction with the industry-proven hardware Collis SmartLink Box (contact) and Collis SmartWave Box (contactless). Both very powerful, dedicated hardware components for testing smart cards and terminals (POS and ATM).

Key benefits

- No physical cards necessary
- Eliminates the risk of lost, blocked or damaged cards
- Contact and contactless real time card simulation
- Comprehensive reports giving insight into application logic
- Reduces time-to-market for POS/ATMs
- Flexible and easy to use

Collis Card Simulator

Specifications

Simulated cards include:

- MasterCard Card Images for contact & contactless M-TIP
 - Subset 1
 - Field Interoperability Subset
 - Subset Maestro UK
 - Subset 6 MasterCard
 - Subset 8M PayPass
 - Subset M-TIP
- MasterCard Interoperability subset (confidence) cards
- MasterCard Card Images for contact and contactless NIV
 - Subset 3
 - Subset 5 PIN Management
 - Subset 6 PayPass
 - Subset 7M PayPass
- Visa contact ADVT Card Images and contactless CDET and ADVT-qVSDC Card Images
- American Express contact AEIPS and contactless Expresspay Card Images
- JCB (TCI) Card Images
- Diners Club Card Images
- Discover Card Images
- Interac Card Images

Hardware

- Contact card simulation: **Collis SmartLink Box**
- Contactless card simulation: **Collis SmartWave Box**

Technical Support

To ensure that you can effectively use the tool and gain the maximum benefits, UL offers for tools a Service Contract that gives you access to our Technical Support services. Our experienced technical team is available to provide support, advice and guidance.

The following services are covered

- New releases
- Helpdesk support
- Bug fixes
- Instant hardware replacement

You can access these services through the MyCollis service site at www.mycollis.com.
